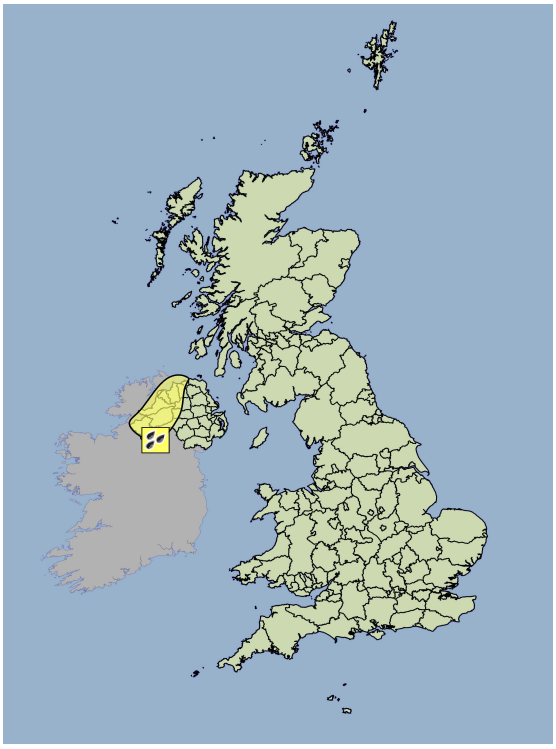
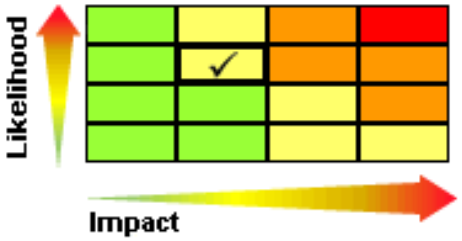
National Severe Weather Warning Service





Chief Forecasters Assessment
Another area of low pressure is expected to move quickly east across the Atlantic, bringing spells of heavy rain to Northern Ireland during Thursday and Friday, particularly in western parts of the country. Within the warning area, 10-20 mm of rain is likely to fall quite widely with up to 40 mm over high ground.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **14:00 on Thu, 28th Jan 2016** until **10:00 on Fri, 29th Jan 2016**

Further rain, heavy at time, is expected across Northern Ireland during Thursday and Friday. The heaviest rain is expected during Thursday afternoon and also Friday morning, with the largest rainfall totals likely over west and southwest facing hills. The rain will be accompanied by southwesterly gales which could become severe in exposed areas. There will however be some drier spells during the warning period.

Please be aware of the risk of localised flooding and potential impacts on travel.

This is an update to split the previously issued UK warning into more detailed areas and times, with the impacts across Northern Ireland currently expected to be low.
